About

Introduction

- School 21 methodology only makes sense if peer-to-peer reviews are taken seriously. Please read all the guidelines carefully before starting the review.
- Please remain courteous, polite, respectful, and constructive in all communications during this review.
- Point out possible flaws in the person's work and take the time to discuss and debate them.

- Keep in mind that sometimes there may be differences in interpretation of tasks and scope of functionality. Please remain open to each other's vision.

Guidelines

- Evaluate only the files located in the src folder of the student's or group's GIT repository.
- If you have not finished the project yet, it is compulsory to read the entire instruction before starting the review.
- Ensure to start reviewing a group project only when the team is present in full.
- Use special flags in the checklist to report, for example, "empty work" if the repository does not contain the student's (or group's) work in the src folder of the develop branch, or "cheat" in the case of cheating, or if the student (or group) is unable to explain their work at any time during the review, or if any of the items below are not met. However, except in cases of cheating, you are encouraged to continue reviewing the project to identify the problems that caused the situation so that they can be avoided in the next review.
- Double check that the GIT repository is the one corresponding to the student or group.
- Carefully check that nothing malicious has been used to fool you.
- In controversial cases, remember that the checklist determines only the general order of the check. The final decision on project evaluation remains with the reviewer.

Main part

Advanced_kubernetes

Respect the rules:

- The repository contains the student's (or group's) work in the src folder of the develop branch.
- The student can explain their work at any time during the review.
- General rules are observed throughout the review. Advanced_kubernetes:
- The report is in the src folder.
- The report has the .md extension.
- All tasks are highlighted as level 2 headers.
- All screenshots in the report are captioned to describe what is shown.
- All screenshots are cropped to show only the relevant part of the screen.

✓ Yes No

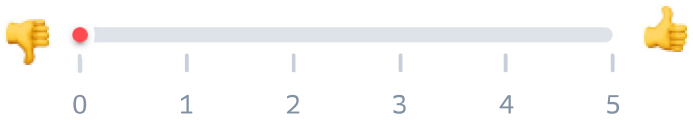

ready_manifest

The report contains a list of commands for applying the ready-made manifest to a prepared environment and for tunneling. The report also contains the command to run the standard minikube dashboard. The application is deployed in Kubernetes and can be accessed via the cluster address.

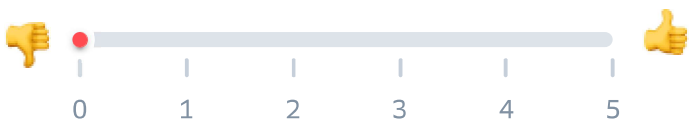

new_manifest writing

- The student wrote several manifests that define the following Kubernetes objects: configuration map (with service and database hosts), secrets (with login, database password, and inter-service authorization keys), Pods, services, deployments. All services have one replica.
- The report contains a list of commands for applying the manifests to the prepared environment and tunneling.

new_manifest Creating objects

- The report contains the results of commands used to check the status of created Kubernetes objects (`kubectl get` and `kubectl describe`), as well as the results of viewing the decoded key-value pair.
- The report contains the results of viewing the logs of an arbitrary container using the `kubectl` command.
- The results of the Postman tests are provided as a screenshot.

new_manifest Deployment

- The report contains screenshots of the standard Kubernetes dashboard. The screenshots contain the following information: the current state of the cluster nodes, a list of running Pods, and other metrics, such as CPU and memory consumption, Pod logs, Pod configurations and secrets.
- The report also contains time measurements of application deployment using two different strategies: Recreate and Rolling. The application is deployed in Kubernetes and can be accessed via the cluster address.
